

Statistical Tables (APA 7th Style) for Github

Table 1

Descriptive Statistics for Linguistic Indices and Human Ratings (N = 30)

Variable	Version 1 (Initial)	Version 2 (Post-AI)	Version 3 (Final)
MTLD	58.42 (12.15)	69.15 (14.80)	74.18 (15.30)
MSL	18.24 (3.45)	20.85 (4.10)	22.45 (3.90)
LSA Overlap	0.42 (0.08)	0.51 (0.07)	0.55 (0.06)
Human Rating	6.80 (1.10)	8.20 (0.95)	8.90 (0.80)

Note. Values are presented as Mean (Standard Deviation). MTLD = Measure of Textual Lexical Diversity; MSL = Mean Sentence Length; LSA = Latent Semantic Analysis.

Table 2

Repeated Measures ANOVA Results for Longitudinal Improvements

Source	SS	df	MS	F	p	ηp^2
MTLD	12450.40	2	6225.20	34.12	< .001	.54
MSL	185.20	2	92.60	18.45	< .001	.39
LSA Overlap	0.85	2	0.425	22.10	< .001	.43
Human Rating	42.10	2	21.05	45.30	< .001	.61

Note. SS = Sum of Squares; df = Degrees of Freedom; MS = Mean Square; ηp^2 = Partial Eta Squared.

Table 3

Pearson Correlation Matrix of Variables at Final Version (V3)

Variable	1	2	3	4
1. MTLD	—			
2. MSL	.42**	—		
3. LSA Overlap	.35*	.28	—	
4. Human Rating	.68***	.51**	.44**	—

Note. $p < .05$, $p < .01$, $**p < .001$.

Figure 6 (Standardized Trends)

The growth trend analysis shows that while all metrics improved significantly, Human Rating and MTLD exhibited the strongest response to AI-assisted interventions, followed by steady gains in Syntactic Complexity (MSL) and Semantic Cohesion (LSA).
